

SenseAnywhere *for Pharmacies*

Simple. Effective. Reliable.

5 minute setup. 10 year battery life. Reliable, automatic wireless monitoring increases data accuracy and eliminates the need for daily temperature readings with a thermometer.

Easy set-up. No maintenance.

SenseAnywhere can be installed easily in under 10 minutes with no cables or software to install. Accessible from any smart device, SenseAnywhere's secure cloud based system requires no maintenance and has an unparalleled battery life of 10 years.

Eliminate Human Error

Eliminate the complications of human error with manual recording, and make the most of your valuable time. SenseAnywhere's system automatically downloads and stores sensor data, generating reports directly to your computer or smart device.

Rely on Radio Frequency

SenseAnywhere uses a Radio Frequency wireless system instead of relying on WiFi, where you are dependent on the strength and availability of the signal or WiFi protocol updates, which can render a system useless or obsolete. Get ahead of future industry regulations, and keep your valuable data secure with a reliable wireless system you can depend on.

**Rest assured that
the drugs you
store for your
valued clients are
safe, viable, and
kept at optimal
temperature
conditions.**
