

SenseAnywhere

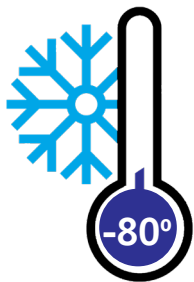

Reliable Full-Range Temperature Monitoring for Vaccines and Pharmaceuticals

A COVID-19 Vaccine is Coming. Are You Prepared?

Vaccine temperature must be carefully and accurately monitored to ensure safety and efficacy.

Cold-Chain Ready

Monitoring vaccine temperature is critical, through manufacturing, warehousing, transporting and dispensing. SenseAnywhere tracks your vaccine's temperature data, in real time, at every step of the cold-chain.

Full Range Temperature Capability

SenseAnywhere is an ideal monitoring system for the full range of temperature conditions, including ultra-low temperatures required for vaccine transport and storage. From -196°C through 150°C, SenseAnywhere has you covered.

Simplicity, Accuracy & Affordability

A 'Plug and Play' solution, SenseAnywhere's calibrated loggers are simple to set up and offered at an affordable price point, while maintaining an impressive accuracy of +/- 0.1°C.

View your data through SenseAnywhere's graphical interface from your computer or smart device 24-7, or use the API (Application Programming Interface) to integrate with your application.

Protect your Vaccines.

FDA regulates storage and monitoring of COVID-19 vaccines.

The health and safety of millions depend on accurate storage conditions throughout their life cycle. **Let SenseAnywhere**

help you meet industry regulations and keep your

vaccines safe and effective.

SenseAnywhere.

Temperature monitoring you can rely on.
