

CSI JEWETT

Pathology Solutions

JGP5 Integrated Gross Pathology Work Station

Ensuring the right equipment for your pathology procedures

CSI Jewett JGP5 Gross Pathology Work Stations are designed to the highest quality and to meet your work center needs. Models feature all stainless steel construction and electric adjustable height control. The 12 inch electric height adjustment allows the work station to fit your height requirements. Ease of maintenance is achieved with the electric column actuator which works without moving parts. CSI Jewett JGP5 Pathology Work Stations can be custom designed to meet your exact facility requirements.

The unit offers an integral sink - measuring 16 inches long by 12 inches wide by 10 inches deep (406.4 x 304.8 x 254 mm) - with overflow protection and a tea strainer for small specimens. The chrome-plated brass faucet is wrist-operated providing hot and cold water flow control valves and a goose neck spout. A palm activated, chrome-plated brass low flow spray hose, for cold water control, is also included. The surface flush/rinse bar provides front mounted rinse and flush controls, ensuring the work surface is quickly and efficiently cleaned. Acrylic side panels protect against splatter and debris. Additionally a full width aluminum grill is adjustable and removable, providing proper ventilation.

General Specifications
